

DID YOU KNOW...

**YOUR GENES CAN
REVEAL THE RIGHT
MEDICATION FOR YOU**

ABOUT THE GSC PHARMACOGENETIC TESTING AND COUNSELLING PROGRAM

If you have a mental health condition and your medication is not helping, you may be eligible for the Pharmacogenetic Testing and Counselling program under your Green Shield Canada (GSC) benefits plan. The results of the pharmacogenetic test can help your prescriber or pharmacist choose a medication better suited to you.

Your pharmacist or prescriber can apply to GSC for access to the program on your behalf, and, if you meet the eligibility and medical criteria, all you have to do is register with GenXys – GSC’s partner in providing this benefit. You’ll receive the GenXys TreatGx^{plus} product which includes the myPGx pharmacogenetic test kit, comprehensive pharmacogenetic reports, and a subscription to the TreatGx software which provides personalized medication options for you and your health care provider.

Taking the test is easy – it’s a quick swab of your lower gums that you send back to GenXys. When your results are ready, your pharmacist or prescriber will meet with you to review the results and decide on next steps.

WANT TO GET STARTED?

Ask your community pharmacist or prescriber about pharmacogenetic testing with the GenXys TreatGx^{plus} product. If your pharmacist or prescriber is unaware of the program, invite them to contact GSC to learn more about it.
